## PREPARING FOR EMERGENCIES

## LI03984

## Provide a summary of the lesson.

Fire Crews were called to an automatic fire alarm at an assisted living development. On arrival of the first appliance crew were confronted with an established fire in a ground floor flat. The initial crew of 4 deployed under rapid deployment and located one male deceased. Following a Fatal Incident review, it has been identified that the deceased was known to the Fire and Rescue Service who had completed a Safe and Well Visit on 2 occasions with the deceased, issuing a number of fire safety interventions including fire retardant throws and bedding to complement the careline system and linked smoke detection in the hall and heat detection in the kitchen. The occupier was a smoker, heavy drinker and was bedbound. The occupier had been moved from his bedroom to the lounge however, the interventions issued by the Fire and Rescue Service and his care line system had not been moved with him. As the reporting service we have identified 2 further occurrences of this within the same borough. Following the internal review, internal policy and procedures have been reviewed with partnership information sharing to now include updated intelligence being shared with the FRS enabling a confirmation of the reject the ment of EPS interventions or the need for reassessment of the occupier.

bedroom to the lounge however, the interventions issued by the Fire and Rescur reporting service we have identified 2 further occurrences of this within the sam have been reviewed with partnership information sharing to now include update reinstatement of FRS interventions or the need for reassessment of the occupie	e Service and his care line system had not been moved with him.
